We Simplify Software Development Process

Discover

We shape brands through exploration, applying in-depth research to challenge assumptions at every turn.

Design

Our design approach is to simplify. We embrace the joy in creating something unique that is easy for end users.

Build

Using modern technologies, we build with efficiency and skill, creating flexible and scalable business-driven solutions.

Deliver

We take an iterative approach to both our work and our practice, always looking for ways to improve what we do.

Focus IT Solutions & Services Company

We are a team of AI engineers, data scientists, and business analysts focused on helping companies adopt AI technologies for operational improvement and competitive advantage. Our expertise lies in custom enterprise applications, technology integration, digital commerce, business automation, and business intelligence solutions.

LEARN MORE ON

Our Current Focus Area's key Points to Consider

Artificial intelligence

AI automates tasks, improves diagnoses, predicts outcomes, and personalizes care in healthcare. Chatbots and predictive analytics are AI technologies to explore.

Enterprise Application Services

In today's healthcare industry, EHRs, CRMs, and other software tools have become critical for managing patient data and improving operational efficiency.

Technology Integration

Integrating Electronic Health Records (EHRs), telemedicine, and patient engagement platforms is becoming increasingly important in the healthcare industry.

Business Automation

Automating routine tasks like patient scheduling, appointment reminders, and billing processes can help healthcare businesses reduce costs and improve overall efficiency.

Digital Commerce

Online booking, bill payment, and medical record access improve patient experience. Mobile apps and portals are healthcare business options.

BI and Analytics

BI and analytics provide patient insights, trends, and better decision making. Dashboards, visualization, and analytics tools help healthcare businesses.

IT & Software Development Solutions for Industries

We are a team of AI engineers, data scientists, and business analysts focused on helping companies adopt AI technologies for operational improvement and competitive advantage. Our expertise lies in custom enterprise applications, technology integration, digital commerce, business automation, and business intelligence solutions.

Transforming Industries Through Innovative IT & Software Solutions

Healthcare

Embracing modern technology solutions such as telemedicine, EHR, and AI in healthcare overcomes cost, workforce, and aging challenges, improving outcomes, reducing costs, and enhancing provider efficiency.

Logistics

Logistics and transportation companies must embrace IoT and AI to thrive in the fast-paced business world, leveraging modern solutions for efficiency, cost reduction, and competitive advantage.

Education

The education system should embrace personalized learning, adaptive technologies, and distance learning to cater to diverse student needs and equip them with STEAM knowledge and critical thinking skills for the 21st century.

Media & OTT

Media & OTT change with preferences & tech. AI & cloud boost content discovery, fight piracy & enhance viewer experience. Streamline ops, increase transparency & improve digital presence.

Travel

Travel industry must adapt fast to meet modern travelers' needs, prioritize health & safety due to COVID-19. Embrace VR, personalization, AI, and contactless services to enhance experience, streamline operations, and boost revenue.

Retail

Modernize retail industry, adapt to changing demands and stay competitive with AI, digital commerce, and automation, to enhance customer experience, boost efficiency, and drive growth, or risk falling behind in today's digital age.

Construction

Embracing modern technologies like BIM, drones, 3D printing, and AR/VR enables construction companies to succeed by enhancing efficiency, safety, sustainability, and competitiveness.

Beauty & Lifestyle

Embracing evolving consumer trends and technology, the Beauty & Lifestyle industry can enhance customer experience, address sustainability concerns, and thrive in a changing marketplace.

Sports

Advancement in technology drives the sports industry, as wearable tech and augmented reality revolutionize gameplay, viewing experience, and data analysis, making real-time insights and player tracking indispensable.

Legal

Adopting modern solutions is crucial for the legal industry amidst rising costs and complexity. Embracing legal tech, automation, AI, and cloud computing improves efficiency and outcomes.

Finance

Technology's impact on finance is profound, reshaping money management, investment, and transactions, with mobile banking, algorithmic trading, and other fintech innovations democratizing financial services.

Social Media

In the booming social media industry, businesses tackle big data, privacy, and user preferences while enhancing efficiency, security, and user experience, gaining a competitive edge through advanced technologies and tools.

Insurance

Insurance companies must adopt innovative technologies like AI, IoT, and big data to stay competitive and cater to customers' changing demands, replacing outdated manual practices in our fast-paced world.

Manufacturing

Manufacturers must embrace Industry 4.0 and cutting-edge technologies like IoT, robotics, AI, additive manufacturing, AR, and digital twin tech to boost efficiency, competitiveness, and sustainability.

IT & Telecom

In the fast-paced IT & Telecom industry, embracing cloud computing, 5G, and AI is crucial for speed, customer satisfaction, and data-driven insights, while falling behind can result in inefficiency, higher expenses, and diminished competitiveness.

On Demand

The on-demand application industry, characterized by services like ride-hailing, food delivery, and home services, has experienced tremendous growth. To meet evolving consumer expectations and address emerging challenges, modern solutions are crucial.

Marketplace

The marketplace industry is thriving, driven by the increasing demand for convenient online buying and selling. To stay competitive in a rapidly evolving landscape, modern solutions are essential. By leveraging cutting-edge technology, marketplaces can enhance user experiences.

Top Web Development Company

IndiaNIC is a top website design and web development company based in India & USA, is committed to delivering the best web design and development services to businesses worldwide. Our team of expert specializing in creating custom websites, web applications, and web-tools that perfectly align with your business goals. With a 100% delivery rate, we are committed to providing the best available solutions that meet your specific needs.

Enterprise Solutions

IndiaNIC is a leading enterprise web development company having specialized in creating top quality, multi-level enterprise-grade web solutions to meet various corporate needs. Our Experience team of expert can develop bespoke enterprise web portals, eCommerce solutions, B2B and B2C applications, as well as ERP and CRM software apps, reporting, billing, and secure financial transaction processing systems, among others. We build our enterprise IT and web solutions using the latest web technologies, ensuring that they are secure, robust, and scalable. Our solutions are designed to help businesses reduce their overall operational costs and enhance their operational efficiency.

Our AI and ML Services Lead Industry Transformation

We are a top AI application development company helping businesses to add intelligence to their ecosystems by building AI-driven applications and integration services. Hire expert AI-ML engineers from IndiaNIC who have proven expertise in AI and ML projects, tools and technologies like TensorFlow, Apache SystemML, Caffe, Apache Mahout, OpenNN, Torch, Neuroph, Mycroft AI, etc. We infuse AI elements to existing business processes to boost productivity and enable AI and ML solutions.

Strategic Planning & Roadmap

Everything starts with a comprehensive analysis of your business, system, vision and goals. Our AI-ML experts will analyse your system to propose a detailed system architecture with associated tools, technologies and ML & AI app development services. To prove the feasibility, we test small-scale models by conceptualizing, designing, developing and testing. This ensures the applicability and viability of the AI & Machine Learning model for implementation. As an AI app development company, we help you with intense performance analysis to enhance overall quality.

DevOps Services & Solutions

DevOps Engineers | DevOps Service Providers | Agile DevOps

In today's digital world, it's important to have a smooth integration between an efficient IT system, development workflow, and business to ensure continuous and progressive application delivery.

IndiaNIC, a leading DevOps Consulting & DevOps Services providing Company, enables delivering large applications at the pace of client business with evolving nature of development with Agile DevOps services to automate the continuous delivery – divided into predictive, well-organized, and consistent ecosystem and operational workflow.

Infrastructure Management

Configuration Management

Environment Setup

Continuous Integration

Continuous Monitoring

Test Automation

Build Automation

Continuous Delivery

Strategic Planning & Set up

Our efficient and well planned DevOps orchestration strategy makes this possible by combining business goals, toolchains, development and operation teams together with automated and streamlined IT processes with expert DevOps consultation.

Strategic Planning & Set up

Continuous Planning

We use Continuous Planning to help our clients achieve seamless DevOps automation. Our expert DevOps consultants check existing processes and systems to create a complete roadmap with expectations and milestones. We also use industry-leading software tools and frameworks like Docker, Puppet, and Selenium to help achieve goals.

Setting goals and milestones

Comprehensive evaluation process

Strategizing roadmap

Illustration of roadmap

Continuous Integration

Continuous integration is a process that ensures developers always have access to the most up-to-date and validated code. This helps prevent costly delays in development by allowing many developers to work on the same source code at the same time with confidence. This is much better than waiting to integrate separate sections of code on release day, which can cause delays and problems.

Code validation

Technical architecture

Close collaboration

Delay prevention

Continuous Delivery

Continuous Delivery (CD) is a software development practice where code changes from various team members are automatically prepared for release to the production environment. We use AWS CodePipeline to practice continuous delivery. This allows us to build a workflow that builds code in AWS CodeBuild, runs automated tests, and deploys code. This process ensures that our code is always ready for release to the production environment.

Identifying risk factors

Automation testing

Change management

Release management

Performance optimization

Continuous Monitoring

DevOps monitoring is important for identifying performance deviations, availability issues, and functional correctness problems before they affect end users. We keep an eye on both the pre-production and production environment using Application Monitoring Tools (APM). This covers Web, API, and Infrastructure monitoring.

Continuous feedback

Aligning client expectations

Overall continuous monitoring

Achieving business goals

Functionality monitoring

AWS CI Workflow

We follow a specific process called the AWS CI Workflow to build and deliver products more rapidly and reliably. This process combines DevOps practices with AWS services to create a seamless workflow for building and testing code. This allows us to deliver high-quality products to our clients in a timely and efficient manner.

AWS CI Workflow

Azure CI Workflow

We collaborate on software development by following the Azure CI Workflow. This involves using source control, work tracking, and continuous integration and delivery to streamline the development process. We implement Azure DevOps Services both in the Cloud and On-premise to ensure that we have access to all of the tools we need to develop high-quality software. By using this workflow, we can work more efficiently and deliver better products to our clients.

Azure CI Workflow

IaaS we use

We work with the leading infrastructure and DevOps service providers.

IaaS we use

Industrial IoT Solutions & Custom Application Development Services

IndiaNIC is a leading provider of IoT services and solutions. With its expertise and innovative approach, IndiaNIC helps businesses tap into the potential of IoT by developing cutting-edge applications for modern hardware-connected systems.

IoT Solutions for Automotive

We create and provide Connected Car solutions using Bluetooth-powered OBD-2 devices, GPS, Geofencing, and IoT technology. These solutions enable us to collect real-time and continuous data about vehicles, their locations, and other relevant details. This data is utilized for various business applications.

IoT solutions for the automotive industry can be a perfect blend of onboard sensors, custom mobile apps, and cloud storage along with the technology used to fetch data. It helps in IoT applications and solutions like:

OBD-2 based Vehicle Diagnostic Solution

Hybrid App Development

Hybrid applications combines the power of web and native application features. At our company, our team of expert developers leverages their expertise in HTML5, CSS3, and JavaScript to create seamless and intuitive hybrid apps that work on both iOS and Android platforms. Our solutions provide a cost-effective way to reach a wider audience, improve user engagement, and boost your business revenue. We use cutting-edge tools and frameworks like PhoneGap and Appcelerator to deliver high-performance mobile app development services that meet your business needs.

Website Designing Services for All Taste Palettes

Creating a simple and effective user interface is a complex task with many details. At our company, we have developed a streamlined approach to simplify this complex process. Our first step is to identify our client's challenges in their design requirements. This involves understanding their audience, goals, and any obstacles they face. By understanding these challenges, we can come up with solutions that tackle each problem individually, making the design process smooth and efficient. With a clear roadmap in place, we proceed to build functional user interfaces that cater to the needs and preferences of the audience.

The Difference We make

We say the discovery is at the center of ingenuity. We learned a little dash of crazy mixed with great discipline, creates masterpieces - we call it "Discovery Workshop".

Design Wireframes

Why Your Idea Needs a "Workshop"?

Think

Not all requirements are development ready

Organize

Ideas evolve and they need to be constrained in a boundary

Prioritise

Organize your thoughts for maximum impact

Goals

A quality product must have clearly defined objectives

Quantify

Deriving scope, for accurate timeline and budget

Roadmap

Choosing the right technology approach to development

Benefits

Benefits Of Discovery / Design First Approach

Discovery Workshop is designed to feed the engineering team, albeit not the other way round that traditionally many IT companies do.

Clear Strategy

Clear Strategy

We work with you to cut the clutter and stay focused on defining critical system features to build a product that's launch-ready.

Speed

Speed

Making the most of our engagement with an agile mindset to produce visible results - compared to the traditional way.

Lower Risk

Lower Risk

Before investing large sum upfront into the entire project and committing in blind, define something that's sustainable and achievable.

Cost Effective

Cost Effective

We work with you to define minimum launchable product so that you can prioritize investments for better ROI, allowing you to focus on growth.

From Discovery Sprints to Agile Development

We deliver quality products that stay within the predefined budget by identifying and adapting to changes much earlier in the entire process, avoiding an irreversible stage where the cost of changes is higher.

The Process

Process Of Our Web Design Service

For each workshop, we assign a dedicated analyst, a UI/UX designer and a technical team who work with you, to do full justice to your ideas with the most relevant and technically advanced solutions.

The Process

Analysis and conceptualisation for web design project

Target Audience, Market and the Problem

Discover & Devise

Market Analysis

Review what's already been done by similar solutions in the market and elevate the experience

Requirements

Identify core needs and vision of the solution with elaborated brainstorming sessions

Conceptualisation

Identify core business problem to be solved keeping end-users at the center

Work Process Arrow

Blueprint of the Core

Define & Refine

Mindmap

Designing information architecture with key modules and activities in a logical hierarchy

User Journeys

Heuristic analysis of user behavior by working backward to design elements that users anticipate

Wireframe

Conceptual block-based representation to uncover visual representation of key information elements

Creating architecture and navigation for web design project

Work Process Arrow

User interface and user experience for mobile and web design project

Interface, Experience & Visuals

UI / UX Design

Interface

As a leading website design company, we surgically crafting beautiful pixels to create a visually appealing interface of relevant screens

Digital Experience

With our mobile app designing services, we create a functional design by carefully orchestrating interface, information, and interaction

Objective Design

We create designs that not only looks stunning but also sticks to solving the core of the problem through our mobile app design services

Design is not how it looks.

But how it works.

- Steve Jobs

Complex systems are easy to create. It takes a surgical approach to craft functional designs that enable users to feel good while using the web/software or an app.

As a web design company, we create simple and meaningful interfaces across screens requiring careful orchestration of all the key ingredients.

Diagram of UI UX design

Work Process Arrow

From Discovery to Development

Handover

Continuing from Discovery to Development

The handover process - irrespective of who the technical team, they act as a catalyst to continue the same momentum and depth of the concept to be engineered. As a leading web and mobile app design company, we ensure this process by visual design to the greatest detail, functional flow and design guidelines that are ready to be shipped as a bundle with our mobile and web design services.

Website designing and development

Clients' praise is Music to our ears

Clients' praise is Music to our ears

Key Insights

Good to Know

Each workshop can be personalized based on where you are with your requirements.

It all starts with brainstorming and analysis phase led by Subject Matter Experts.

Wireframes are followed and are based on the requirements gathered by analysts.

UI Designs are always based on the wireframes derived and user journeys identified.

For each stakeholder of the system, a separate UI flow with detailed screens shall be created.

After UI designs - an interactive prototype containing designs shall be presented

Each phase is preceded by the stage earlier to it as depicted in the Workshop Model.

We're absolutely OK to skip a step in the workshop if that's something you've already achieved OR can achieve on your own.

We work with all modern toolkit e.g. Sketch, Invision and at times various other tools such as Principal, Flinto and Adobe XD

Discovery Workshop

Shaping up ideas into robust solutions

Everything begins with a genuine idea. But there must be reasons behind why all ideas do not transform into what others call, a "Success". To avoid such calamities, IndiaNIC gives paramount importance to a custom designed Discovery Workshop, just for you. Let's know more about it!

The Purpose

“The goal of Discovery Workshop is to educate our clients to provide thorough information through brainstorming sessions before the development cycle begins. This will help us to deliver a robust, unique and out-of-the-box solution with stunning UI/UX design using the most advanced technologies”.

The core purpose is not only to share project requirements, but also to understand client expectations and facilitate them with our quality and experience.

Forefronts of Discovery Workshop

Understanding

Allowing our entire team to get complete understanding of our client’s business, vision and goals.

Research

Allowing us to make our own assumptions and research any aspect that we might feel differently about.

Implementation

Allowing UI/UX and development teams to go through detailed information for flawless deliverables

Allowing UI/UX and development teams to go through detailed information for flawless deliverables

In more simpler terms, for a software development or mobile app development project, Discovery Workshop is the pre-development stage of gathering and sharing relevant project information between client and the project team. The platform for information sharing could be on site/off site meetups and online conferences.

A specially curated session is a project initiation process to shape up your ideas, engineer your requirements and to take your product merely from a concept to advanced development stages in lesser time.

What can a client expect during these sessions?

Analyse, identify and present information on core vision, industry problems, strategic analysis, niche targets, project scope, etc.

What can a project team do for you?

Explore the subject area and business flow, identify bottlenecks and present relevant solutions, organize the clutter, create a roadmap.

Why Clients Shouldn't Overlook Discovery Workshop?

"Imagine yourself as a client looking to have your mobile application developed. After searching for a while, you agree contractual terms with one esteemed software development company. Given the fact that you already have a good idea of what your app should look like and how it would work, you simply ignore the project discovery workshop due to tight deadlines, time and money constraints. So you finally decide to handover the specifications document to the technical team and set a specific deadline for the delivery and product launch.

In this case, the software development team would not have any further queries and starts mobile app design and development process to deliver the product well within time. Those few weeks or months pass quickly and you finally have a stunning mobile app ready. You make the mobile app go live and wait for the first new visitors with high anticipation and excitement levels.

After a couple of months, statistics and analysis derive that your app users are not enjoying your beautifully designed app and conversion is far away from your expectations. This results in a situation where you already have spent most or all of your capital in app development and now do not have enough money to develop it further due to failed ROI. This would be the moment when you say to yourself : "Something went wrong badly."

Discovery Workshop Nullifying 3 Main Problems for Clients

Discovery Workshop Nullifying 3 Main Problems for Clients

1 Underestimating project implementation costs

2 Launching a product in the market with less or no potential

3 Finding on product not solving user needs

Discovery Workshop Nullifying 3 Main Problems for Clients

UI/UX Designing

The UI/UX design team may be the biggest thinkers and though we have the best talents delivering outstanding designs week-in, week-out; we believe that clients are equally important part of Discovery sessions to make an end product a success. Key details are very important for thinking and visualisation process for design team! If you don't want key details to get lost in translation, you need to plan the process out right. It is to ensure that all the features you expect to be developed are covered in the product's roadmap/ user journeys. This is achieved when there is a smooth transition of information between design team and other project stakeholders.

It's about "Designing Together"

This is where we craft our ideas into wonderful designs. First representation of bringing your ideas into reality. An effective collaboration of Clients, Project analysts, UI/UX designers can help in following ways:

UI/UX Designing

Clutter of ideas is organized efficiently to define critical system features Interactive set of UI/UX designs to visualise the end product Best way to build a complete feature product/ software listing that is understood to everyone Swift Prototype development Outlining system architecture design – the Blueprint of the Core Low risk development of cost-effective launch ready product Full fledged user journey derived through expertly crafted on screen mockups

Let's summarise what we learnt so far

The little time and money spent after discovery workshop will be a huge favour you would do on yourself, once you realise its benefits on a longer run. Discovery Workshop is essential for any project related to software development or mobile app development process, as it offers to:

Make precise decisions based on evidence instead of assumptions Craft and create every pixel and design by keeping users to the core for better UX Get accurate estimates through better understanding of project scope and goals Save time & money by eliminating the need of making costly changes on advanced development stages Ensure a high return on investment in the development Gain better development insights through expert consultation with project tech team

Discovery Sessions

Realising your app idea's potential and execution of it - both are completely different. The whole undertaking can seem especially difficult if you have little to no experience implementing digital products. We can help you refine your ideas in a way that allows you to take the first few steps into your project.

Project Execution Process

Our project execution strategy accounts for all types of projects, whether you're starting small, growing systematically or already entrepreneurial. Our approach towards each project is categorized and well balanced to every client's requirement.

Working

Methodologies

Waterfall Method

For Constrained Budget

Very clear scope and stable set of requirements that isn't likely to change throughout the project

Agile Scrum

For Evolving Scope/Hired Team

The scope is defined very briefly and the requirements are very likely to change throughout the project

How to Engage?

Every project is unique – and hence requires a dedicated and special treatment. Besides the critical triangle of cost, time and scope, the working model between the ‘client’ and the ‘agency’ also plays a crucial role in balancing the former.

That’s why we have clear and robust project execution models which are very flexible and client-centric at their core. But before embarking on any project, whether it’s a simple website or a more complex software development, it is important we help you employ the ‘correct’ project execution model.

“A project might be completed without the use of a project execution process, but most times, the absence of one leads to the failure of it”.

Waterfall or Agile? The right process for you!

Out of the numerous project management methodologies available, we make use of the two rather popular methodologies. The Waterfall Methodology, and The Agile Methodology. Each of these methodologies has the specific type of projects they are best used with. Identifying just the right strategy and execution model based on project characteristics is a crucial decision that our team of experts helps you make.

Review

The waterfall methodology is broken down into linear, sequential phases with each phase dependent on the deliverable of the previous phase of your project. The lifecycle of a project under this method can be summarised under five segments:

discovery, definition, design, development, and delivery.

To understand if your project falls into Waterfall Project Management, it needs to take into account assumptions made about the project, project constraints, the project objective, its business needs, and the acceptance criteria of the project among other things. If all these factors are well defined and measurable, then waterfall method works for your project.

Because your project will have relatively defined features and functionality, A software requirement document (SRS) will be laid out to describe expectations and scope of the project which will be used till the final handoff of the project.

What if my requirements evolve?

Because of the uniqueness of every project, there are bound to be uncertainties during its execution. This could be anything from buggy third-party dependencies to change in existing scope. We make sure these uncertainties are identified and planned for by managing risks for your projects.

Additionally we take the time to plan out the various aspects of a project before execution, but things are bound to change as time goes on. 'Change is the only constant' thing in a project.

Hence we have a system put in place to manage these changes. We measure the impact of changes on the existing scope, and calculate the time and cost that comes with the changes. Finally, we make sure we update the SRS document.

The Waterfall Process continues as it is meant to be, with Quality Assurance Process in the end to make sure our project deliverables tally with the predefined or revised scope of the project.

Use Cases:

The Waterfall Methodology

Stability

Has a very clear scope and stable set of requirements that are unlikely to change throughout the project.

Predictability

Can define clear long term milestones and can review the progress based on periodic deliverables.

Development Ready

Less time to spend with the development team due to the product owner needing to focus on the business side of the venture.

Strict Budget

Constrained budget with critical features that cannot be compromised.

Engaging with Agile SCRUM Method

Continuous Iteration. Quicker Risk Mitigation

The SCRUM methodology is an implementation of the Agile project management approach that requires continuous iteration of development and testing in the software development lifecycle process. Both development and testing activities are concurrent unlike the Waterfall model.

Agile Vs Waterfall

When does Agile Project Execution Model Work?

A product requires iterative development and requires development with an integrated team.

A product requires a faster risk mitigation strategy or a “fail-early” approach to development.

The quality, cost and time for developing the product are important constants with flexible and varying requirements.

Roles in SCRUM

We have three key scrum roles. There is the product owner —the one who came up with the idea for the product, the scrum master who ensures the team members follow the agile principles and value, and then the team members themselves; they are ideally a team of seven cross-functional members.

Deliverables in Agile Method

Product Backlog

This is generally in the form of user stories. It is prepared by the product owner. It is here the product clients vision for the product is drafted.

Release Backlog

The release backlog is prepared by the SCRUM master who takes the product backlog as input, and translates it into a list of tasks that would be released intermittently.

Sprint Backlog

This is prepared in collaboration with the team. Here, the release backlog is taken and divided into sprints of one or two weeks.

Defect Backlog

The defect backlog contains a list of defects identified during the one to two weeks sprint. These defects are dealt with immediately which is necessary for a project to be declared complete.

Agile Meetings

We have three key scrum roles. There is the product owner —the one who came up with the idea for the product, the scrum master who ensures the team members follow the agile principles and value, and then the team members themselves; they are ideally a team of seven cross-functional members.

Use Cases: Agile SCRUM Methodology

Short Team Goals

Clear short-term milestones and periodic reviews of the progress.

Iterative Development

More time to spend with the development team by sharing clear objectives and goals so that they are always in sync with the project manager.

Feature Inspection

Multiple iterations of a given feature and fine-tuning of the feature by inspecting all the parts.

Sprint Planning

The client requires early and frequent opportunities to look at the product and make decisions and changes to the project.

Continuous Reviews

Make regressive iterations in the testing phase is required.

Agile works best with projects that have a high level of uncertainty

Waterfall works best for projects with high value and certainty.

Both Agile and Waterfall are two different schools of thought in the project management world. The right project execution process, whether it's Waterfall or Agile depend on the context of your project. Like we always say-Every project is unique and requires a different treatment altogether.

Contrary to popular belief, Agile methodology doesn't work with all types of projects. For instance, if you own a grocery store, and it works well, and you want to open another one. You don't need 'Agile' way of project management. It would simply be a waste crucial resources that are already scarce. How we help our clients identify if they need Agile methodology is based on the level of uncertainty, value proposition, operational and value risks involved.

Similarly, Waterfall method better known as the rather 'traditional' method to project management is used for better 'quality' standards due to its strict documentation and 'assembly line' production features. Well that's not entirely true, as 'Quality' is subjective to a projects context. You can build quality into Agile projects just as much as you can in Waterfall projects. You can also have bad quality in Waterfall projects just like you can in Agile projects.

Taking proactive measures for efficient delivery

Periodic review to inculcate a 360 ° view of every situation in a project

This review process occurs within different time frames based on project criticality and complexity. The aim is to review key deliverables, team alignment, and everything that effect timely and effective delivery of project.

For any project to sustain in a predictive way to ensure the core 3 triangles of scope, time and budget remains predicted, there must be a structure to see beyond numbers. Unlike many others – we don't just look at numbers.

The aim of the review is to measure to the “Completeness” and the Experience.

To do so, we involve key stakeholders who drive the project as well as some of the neutral but well experienced members from other teams to take a look at the results and eliviate the project situation to a greater satisfaction level.

Collaboration ⇒ Lot of Feedback

Client

Developers

Project Manager

DU Head

Sales Team

Designers

Everybody has their own side of picture

Hard to find objectivity in different situations

Stakeholder ownership changes over a time

Breaking Bad

The myths that exist for an offshore team

What client thinks?

Start is too slow

Miscommunication

My team is too inexperienced!

Indecisive Milestones

Dissatisfaction

Nobody cares!

What's the reality?

Lack of 100% understanding

Knowing only a tip of the iceberg

Slower feedbacks / approvals

Unknown priorities at client's end

Just doing it as a task (actually a lot of clients expect us to do so :))

Echo Meetings - The Project Review Process

All of the projects on in the development stage are reviewed every 2 weeks at least. In certain cases, for the projects that are slow, we review them at least once in a month. The aim is to review project timeline, open issues, current team feedback, efforts burn down, delivery milestones and overall schedule of the project.

This not only gives us a clearer picture of where the project is – but gives a foresight into the immediate future too.

100% transparent sharing of facts and current situation

Review Efforts, and Project Delivery Milestones

Review immediate forecast, plan and known risks that might just arrive.

Echo Meetings - The Project Review Process

Looping in Clients in the Review Process

We know an internal review gives us one side of the picture. However, successful offshore projects always require client attention, especially when you're measuring success or failure.

Identify Internal & External Risks Elements

With clients involved in such an evaluation, the team can also get to know some of the risks from client end too which generally are not shared initially.

To Ensure projects are on track and schedule

Planning based on current situation is more relevant than a plan that set from day 1 of the project - allowing adaptibility and practical approach.

Ensure entire development cycle is smooth

By ensuring the engineers and designers are the team on the ground, and when they have predictive results to produce, the quality becomes better.

Stakeholders In Review Process

Presenter

The Project Manager or the Team Manager

YOU - The Client

Project Owner

Moderator

Team member from IndiaNIC Account Management Team

Team Members

Anyone from team who can add value to the Project Review

1

Scheduling

Review meetings are NEVER ad-hoc. They're always scheduled in advance and stakeholders are sent calendar invite well before the meeting occurs.

Shared calendar with all key stakeholders

Planned intimation of review session

Prior notifications

Summary of past review action items

2

Review Presentation

A review presentation by a Project Manager or Scrum Master at IndiaNIC keeps a stable presentation with most up to date information.

Current State of the project

Current stage of development

Known Risks

Dependencies

Ask for recommendations

3

Reviewer Findings

A project reviewer – either client or a neutral reviewer has to submit their findings with a form to ensure they are captured and turned into action items.

Overall feedback about team, and their way of working

Your suggestions to improve the deliverables

How we can make these presentations more productive and efficient

4

Moderator Review

A neutral moderator keeps an eye on if the meeting is executed properly and also jots down his/her findings in an evaluation form which is captured.

Ensure review is done properly

Done with appropriate detail about project

Incorporating your feedback into deliverables

Improve presentations based on your feedback

All it takes - Less than 2 Hours / Month

What IndiaNIC Does?

Not a usual discussion that you do every day with team

More than short term goal setting

Affects overall deliverables

Gives clear picture of broader goals than just a set of routine tasks

What Client's Need to Do?

1 hour every month

Proactive suggestions

Open mindset

Stronger collaboration

Trusted by leading brands across the world

A brand is a voice and a product is a souvenir. We are proud to have worked with some of the world's leading brands to deliver innovative products and solutions.

Dedicated Teams

General

Where IndiaNIC is based in? What is the workforce?

Since 1998, we have been a leading offshore software development IT company headquartered in Ahmedabad, India. Ahmedabad belongs to the state of Gujarat, and is one of the fastest growing cities. We have presence in Los Angeles, USA too. We have a very talented team of more than 600+ great people, the majority of which are in our headquarters in Ahmedabad.

What is your core expertise and industry experience?

We have an extremely talented team of web and mobile app developers who can build great Mobile Apps, Websites and Games. When we started in 1998, we began with web development services. Since then, we've come a long way, especially since the launch of smartphones. Over

the era of more than two decades, we have been a class apart when it comes to web development, mobile app development, and game app development services.

Does your company provide a paid support contract?

Yes, we do. You may ask for the extension of our project support after the project is completed. Nevertheless, the charges vary from project to project. You may ask this once the project size and scope are defined.

What about secrecy of my Idea?

Everything begins with an Idea and we know – each idea is precious. We take great responsibility in ensuring your idea remains confidential. To accompany our commitment, we sign Non-Disclosure Agreement (NDA) right before any discussion. Even during the web or mobile app development project, we ensure strict security and confidentiality measures to nullify the unauthorized sharing of information. We also have legal agreements with all of our employees including software development teams for maintaining security and trust.

Do you reuse code?

It is a tricky question to be honest. We do not re-use your proprietary algorithms, license keys, trade secrets, trademarks, patented processes anywhere else. However, considering the authoring process of producing the code, we do use a lot of open source libraries and our own libraries to save development time and avoid re-inventing the wheel all over again. This ensures you do not have to pay for something that can be produced quicker and with more quality.

What is your project development methodology?

Every web or mobile app development project is unique and requires a fresh approach, but most projects pass through some of the most common project development steps – i.e. Requirement gathering, analysis, solution consulting, wireframe/prototyping, UI design, development, and testing. However, depending on the scope and type of the software development project, the sequence and selection of steps may vary.

Can you send over the resources onsite for initial startup?

Yes, if the project requires it and where our representatives are present, we will be happy to send over the resource onsite for the initial startup. IndiaNIC offers affordable engagement for global clients to hire dedicated developers to work on client locations. Nevertheless, in the case where our office is not present in your city/country and if the project is big, we will visit your place from our corporate office.

Do you work according to client's time zone?

All of our development team works out of our headquarter – Ahmedabad, India. However, depending on the nature of the work, specific situation and in case of special meetings, we can certainly stay awake to ensure we connect during your working hours. However, we'd prefer having this be scheduled prior to the event so that we can plan our rest of the schedules accordingly.

What is the Quality Control Methodology which you have in place?

We follow robust processes to ensure the best quality. For software testing, we use the black-box method. We have a dedicated division for QA and QC that ensures every project is scanned through them. Covering all the different kinds of testing, they give a final 'OK' before the final handover and deployment.

Do you have Service Level Agreement in place?

Yes, we do have. We are a trusted offshore web and mobile app development company since 1998, adhering to protocols of IT industry. We have a service level agreement in place as a symbol of trust and quality IT services delivery.

What's your pricing model?

We have a very simple model. We work based on the "Fixed Scope" model, where we give you a finite timeframe and fixed price. The second scenario is for "Evolving Scope" – where you're not sure how big or detailed the project is going to grow. In this case, we will compose a team of different technology experts who will work with you on building project as it evolves. Since it is difficult to determine a short deadline for such projects – we charge you for each team player that is required on monthly basis. In both Fixed Scope and Evolving Scope – we let you know the milestones on which you have to make payment. In most general cases, these payment milestones are tightly aligned with the delivery milestones.

How do we communicate with the project or software development team?

We use Basecamp for project communications. We sign you up in there and loop you in with the rest of the IndiaNIC team who's going to work on your project. Apart from basecamp – we of course use Email and Skype. You'll generally discuss with a Project Manager and Tech Lead – but we're not having constraints in case you want to speak to any member of the team who's working on your project.

Web Development

What is CMS? Do I require it?

Content Management System is a software package, which makes maintenance of websites in a more systematic way. The owner can manage their websites without any help. In case you want multiple users with multiple roles for your website, CMS is recommended.

What is portal? What are the benefits?

A web portal is basically a website that uniquely fetches data from various sources. Generally, every information source has its own section on the web page to display info. These days, revolutionary changes in technologies have made portals rendering greater benefits. Portal promises to deliver a more consistent and logical info management platform. As a result of this, it is a more user oriented approach for better accessibility.

How do you test the project?

We have a special department (QA & QC) to test projects. We follow the series of below mentioned robust testing for the projects we develop. 1. GUI testing 2. Cross browser testing 3. Black box testing 4. Navigation testing 5. Network testing 6. System testing 7. Unit and integration testing 8. Functional testing 9. Testing on various devices and platforms. Before the project is ready for the above mentioned testing, we parse the code using special software and also manually. Our special programmers leave no stone unturned in screening the codes before executing them for the final version.

What is the average time you take to develop a website?

The overall time to develop a website depends on several factors. The first one is the complexity of the project. A static website usually takes less time than eCommerce websites or websites that require flash development. Some minor or major changes may increase the time limit. An average time taken by our web developer for a static website will be lesser than a website with flash and other dynamic graphics. Nevertheless, to develop complex websites such as eCommerce website takes a bit more time.

What's your USP as web development company?

Our quality service at affordable cost is our USP. We know the value of your money and hence, we work with full dedication and devotion to turn your venture into a successful one. We have pool of experts in various technologies including php, Microsoft (.net), Java etc. Whether it is a simple, static website or a complex, eCommerce project, we never let our clients' compromise with the quality. We put the same efforts and dedication into a static website as we do in a complex project. We provide efficient web development services in various top frameworks including the various open source PHP frameworks.

Do you offer mobile device compatible website?

Of course, we do! It is known as Responsive Web Designing and Development. Hire web developers from IndiaNIC, who have hands-on experience on the latest technologies based on HTML5 and CSS3. We develop eye-catching and graphically convincing web designs that fit even on mobile devices. Nevertheless, you may have to specify this in your objectives before the website or web app development project begins.

What design options you provide? Do you provide templates as options?

Yes, we do provide a few options. However, we encourage our clients to be precise in their requirements and elements on the website depending upon what, we develop a few options. This saves time and money and fastens the process of web development.

How many changes I can make during the website development project?

Generally, no software development company provides you with this. But IndiaNIC offers a couple of changes during website development other than the objectives specified. Nevertheless, we firmly suggest discussing and defining the scope and elements before the project begins. This saves time, resources and money on iterations as much as possible.

Do you provide web hosting as well?

We do it only if clients ask.

Do you have similar websites as mine designed earlier?

Since 1998, we have developed thousands of websites for companies belonging to different industry verticals. Be it blogs, portals, eCommerce sites or enterprise-level sites, we have expertise and experience in every aspect of website development. We'd have to analyze your specific requirements to say with certainty that we have developed websites similar to yours. But more likely than not, you'll find that we have worked on projects similar to yours.

What is your architecture to design or develop the websites? Do you have different frameworks?

We use standard architecture –Mobile View Controller (MVC), a type of UI separating the representation of information from the user interaction. We do have different frameworks and use as per the project type and demand.

What is open source? What is difference between open source and MS tech (.net)?

Open source denotes to apps development wherein the coders can access and alter the source code. MS Technology (.net) is a commercial source with limitations on code use, change, and distribution. Open sources are free to download (and so low in cost) and have good community support.

What is static/dynamic website? Which one suites me?

A static website is coded entirely with HTML where every webpage is a separate document without any database or external file to depend. Said this, the only way to edit such a page is by editing each page separately. A dynamic website has complex code like PHP or ASP with a

greater degree of functionality such as integrated with the content management system. This has a database and other source support. In this, you can update web pages without having knowledge of HTML or software. It solely depends upon your project type and the purpose. While fixed websites (that don't require much data to be drawn from external sources) are better developed in static, others are good in dynamic.

What are cloud services?

Cloud computing is having specific data you require ready for use anytime from anywhere. For this, data should be transportable and mobile. The purpose of cloud services is to synchronize data among several devices and fast access. As of now, we don't provide cloud services but we certainly develop mobile and web applications that are cloud compatible. You may mention this while developing an app and we take care of it.

If I have an eCommerce store to develop, what's your recommendation and why?

eCommerce requires special coding and huge flexibility. We recommend closed or paid sources (such as ASP.net) over open source technology for several reasons out of which, security and flexibility are the major concerns.

Mobile Development

What is the difference between Native App and Web Based App?

Native apps are built for specific platforms (e.g. iOS, Android, Windows Phone, etc.). They are built using platforms' native SDK and development platforms and are able to use some of the specific features of the device – e.g. Camera, Volume controller, speaker, etc. The web-based apps (also web-apps) run within the mobile browser and are virtually web pages that imitate the look of a native mobile UI. Such apps are advantageous over native apps as they give the same user-experience on different smartphones. However, they can't use some features of devices like native apps.

Do you develop mobile app for all platforms?

Yes, we build mobile applications for all major mobile development platforms. You can hire our developers for developing an app for iOS (iPhone and iPad), Android, BlackBerry, Symbian, and Windows Mobile. Whether you want to develop apps for just one or two platforms or want to develop an app that works on all the mobile platforms, we are at your service.

Suppose you develop app for me, what about the revenue this may generate?

We don't have control over this. Nevertheless, most of the applications developed by IndiaNIC do well on the market. If you are keen to earn out of the application, we recommend using our Business Analysis provided by the experts. IndiaNIC offers consultancies in such cases.

Are you open to go for App development on partnership basis?

Yes, we are. We have a professional partnership model for clients who want to grow in business with us. Since 1998, we have been in collaboration with partners from multiple global locations with whom we have established a long term vision and business relationship.

What if I want changes to be made in the app once it is launched or delivered?

If you want the changes to be made in the app, it will cost you. We recommend having the project scope defined before beginning the project to save time and money.

Do you also upload the application to app store?

Yes, we do it for free. Nevertheless, you'll have to pay the minimum amount of charge (fees) by the main company (for example Apple App Store Yearly charges US\$99.00).

Which framework or programming language would you use to develop a mobile application?

The framework or programming language that we use to develop applications depends upon the chosen platform by the client. For example, for iPhone applications, we use iOS SDK, Objective C, Swift, Xcode, and other tools and technologies provided by Apple. Similarly, for Android applications, we use Android SDK. We have expertise in frameworks of Open Source and Microsoft Technologies for Web Service and API based applications.

Do you also do marketing of Mobile apps?

Yes, we do.

Can I make one app which would work in all platforms (like iPhone, iPad, Android, BB)?

Yes, you can get an application that would work in all platforms. For such development, you need to go for cross-platform mobile development in which our developers use frameworks that are used to develop the main application and then deploy it across your desired platforms. For more information on our cross-platform development services, you can check out our services for cross-platform mobile development.

Can you use the graphics / UI which I have created?

Yes, we can. You can hire us for just writing codes for programming.

Does your company guarantee that Apple won't reject the app?

Most of the mobile apps we develop don't get rejected. There are no special criteria for this but just making a neat and clean app works. Our apps are full-proof and bug-free as they pass from various robust testing. Though we don't guarantee approval on iTunes as it may be rejected other than a technical fault.

Do I require Hosting or Website to get a mobile application developed?

Need of hosting or website depends on what architecture your application is using. If your application requires database and web services that connect database to the app, you need hosting in order to manage database and those web services. If you already have hosting infrastructure and server – we can help you utilize the same. As far as website goes, if you need your end users to do any activity or you need website for marketing your app, we can help you develop that as well.

Can we update the content of application after it's built?

You may! Nevertheless, this may be chargeable.

What are web services / API?

Unlike web apps, mobile apps do not have access to remote databases. In order to fetch the data from the servers, an alternative service is needed. Web services or APIs are that alternative. By creating XML/JSON files from the database, we can use data from these files for user application.

Can we use Flash?

No. Flash is not supported on any iOS device. The support for flash is going to be discontinued from Adobe (who owns flash now) for mobile devices. Also, the flash is very rapidly being replaced by core SDK capabilities and HTML5.

Do you get my app listed under “New and Noteworthy”?

Well, who doesn't want to be there in that spot? 😊 Saying that, it totally depends on how cool is your app idea, as well as the app as one solid product. Apparently, it is all up to Apple and Google staff when it comes to selecting an app to feature there. But having a great concept put together well increases your chances. So, it is not just us, however our role could be significant in having you take your app to that place.

Hiring Models

Can I select my preferred developer? If yes, how do I do so?

You may choose your own software development team if you're going for an Evolving project scope model. You have to share with us the profile of the ideal candidate and we'll schedule interviews with you and our team members.

Is there a minimum limit for hiring developers under Evolving Scope model?

Well, there's no limit as such. You can hire as little or as much as you think your project will require. However, we will certainly help you in composing the best team that helps you take your idea to the market with unmatched quality and customer service.

Is there any minimum period of hiring programmers for my project?

This is applicable to the Evolving Scope model. We require that you hire a team for at least 3 months minimum – so that they get to know your objectives, align closely with your team (if you have) and ensure all critical aspects of the projects are taken care of. During this period – they'll not work on any of the projects except for yours. If you see you need shorter engagement, we'd recommend you go for a fixed price model.

Can I alter the scope of the during development?

Well, we always prefer that project scope is outlined and concluded upfront in case of Fixed Scope model (as the name suggests). Obviously, it is purely due to the planning and expectations set in terms of timeline and cost. While in the case of Evolving Scope model, you're free to make alterations because you'll be directly driving the team here – giving you enough room to set new goals, scope, timelines and everything else. Although – even in the later case, we recommend you plan small, execute it and then set up new goals.

I am not a techie. Will I still be able to work?

Certainly. While we absolutely love our clients to be technical, we also carry years of experience with us to fill in the gap for technology on your behalf.

My documentation and project scope are ready, and my requirements are clearly defined. What next?

It couldn't have been better. If you know what you'd expect from the development team and know what to execute, it will require much less time to get started. We just need to understand everything you've got for us on the table and we can figure out the right engagement model for the project. We can provide you the estimates and Fixed Scope model would just be right for you.

May I interview the developers I hire for my project?

Yes, you can! In the model where you build your own web or mobile app development team, it is possible to interview and evaluate the skills of programmers at IndiaNIC. Nevertheless, you are provided with each developer's resume that contains information about their expertise and experience in the domain.

What technologies does IndiaNIC work with?

Oh we are absolutely in love with modern technologies. We carry tremendous enthusiasm to learn, adapt and implement new technologies. There is an array of technologies we have excelled when it comes to Web including PHP and .NET – of course with a bunch of open source and SaaS products. For Mobile – we work with Native SDKs for iOS and Android. We also work at times with cross-platform tools such as Titanium, PhoneGap and Configure.IT. For creating stunning UI and Graphics, we use a combination of software such as Adobe Photoshop, Sketch, Affinity, and Corel Suites.

I have a technical team at my end. Can you work in conjunction with them?

Of course. We'd love to collaborate with fellow team members at your end who can make a great team along with our team. We recommend hiring a team of people from our us – who can fill in the gap of your team to establish a perfect balance for your project.

Dedicated Teams

Why should I hire dedicated developers from IndiaNIC?

We've been in outsourcing service for more than two decades now. We were there when nobody was around, and we're still going strong since 1998. We have had situations with clients and have continuously refined our internal operations, service quality and communication with the help of learnings of all these years. We have a very strong team bond, where we share a lot of things – good and bad. That's what keeps us on our toes to ensure to excel at what we do – while we continuously learn from our mistakes.

We are a perfect blend of young minds and experienced veterans in the industry. With 50+ people working with IndiaNIC for more than 8 years, our average age of the team is still below 28. This is absolutely great sign for driving great ideas backed by even greater minds. For more about us – please visit www.IndiaNIC.com/about.

During the execution, does your team completely rely on client to provide all the information?

No. They don't rely 100% on you for generic cases. Most of the time and more often than not – they'll find out the solution by seeking advice, consulting and technical help from their peers, supervisors and experienced members within the team. However, the more the team knows about long term goals and you treat them as your own team, the better they can perform. All and every expectation shared during the early stage of engagement ensures meeting them over a

period easier. Nobody likes surprises and it's the communication at an appropriate time that can cover it up.

Just in case, our hosting services or any other related services are down, do you own the problem or you prefer to say "that's not what we're supposed to do"?

We believe it is our responsibility. However, something that's within our reach or access – we can certainly chime in and help you to fix the issue even before it arises. However, in certain cases – our clients prefer to leave a few parts of the project to their own teams. In such cases, we can't do much – except to guide you or show you the solution. To be able to "FIX" the problem itself – we need to have your permission along with the access.

Can you give quote over quick phone call?

Certainly. The pricing in terms of number is not a difficult. However – as you'd expect, it is not JUST about the price and quote only. The core benchmark of pricing depends on lot of factors such as composition of team, experience level required and type of engagement as well as the length of minimum commitment for the contract.

Most critically – the actual solution that needs to be developed plays a vital role here. It depends a lot on whether the solution has to be built from ground up or work is required on a system that's already built and is live. In both cases, there are many discussions that need to happen in order to craft a perfect and transparent cost model.

Do you have public holiday calendar for days you'll not be working?

Certainly. We will share our holiday calendar upon initiation process – and will also keep you informed a week in advance for any public holiday.

Do you allow developers to come to our offices and work with our local team?

Absolutely. This is totally possible. We can arrange for the developer(s) to visit your country and stay there to work with your team for a period. In such cases, you have to bear the costs of Visa, travel, accommodation and per diem expenses on top of their monthly fee. This can be discussed and may vary on a case-to-case basis.

How much experience do your developers carry?

We have developers from 1 year to 8 years of core programming, project management and QA experience. Many of them also have industry specific experience in terms of driving solutions catering to a domain. Having said that, our core expertise is programming. The more domain knowledge and expectations in terms of technical requirement and solution brief you provide, the better the development quality that can be exhibited.

Do you have certifications for your developers?

Yes. We recruit experienced developers who have done bachelors or masters in computer science, information technology and computer engineering. On top of that, we time and time again obtain certifications from applicable technology vendors to pass through their examination and eligibility process. We already have developers who have Magento Certification, Appcelerator Titanium Certification, Unity 3D certifications and many others at organization level.

Do your developers keep them updated with the latest in technology?

Staying updated in the modern technology world is not a choice. We totally understand the importance of staying up to date and not only just that, ensuring to update the knowledge which is trivial in terms of communication, technology trends, version updates etc. For the same, we conduct regular internal and external training programs as well as participate in online courses, to gain knowledge.

What in case if the developer decides to leave your company?

We require that anybody in our company who wishes to leave us – they notify their immediate supervisor, delivery head and HR team at least 2 months in advance. When they resign from their job and we accept their resignation – we immediately plan to switch the resource and initiate a handover process along with knowledge transfer (KT) to the new developer. During the transition the new developer takes up the front seat while the person leaving the job have to support and ensure the new developer is in full control of what is supposed to be worked upon. Before leaving the company, the resigned developer signs EXIT NDA with IndiaNIC, where they undersign the confidentiality and non-compete, non-sharing terms. They also handover all credentials and access and communication rights back to the relevant authorities at IndiaNIC.

Can the developer work in the same timezone as ours?

Our developers works out of our India Development Center. They work for 8 hours a day and can be available to work easily between any slot between 9:00AM to 9:00PM India Time (+5:30GMT). It is totally fine if you need a meeting in a week for discussion during your timezone. However, if you require them to work dedicatedly during your timezone only – they can certainly made available. In such cases – you have to pay a nominal additional fee to ensure they're available during your timezone.

How do I begin once I have clearly identified what type of developer / designer I need?

Once you've identified the type of developer to be hired, you will be presented with a few ideal candidates' profile in form of their resume. You can decide to interview them personally and see for yourself, which candidate(s) fit in the best for your team. Once you select a candidate, the actual project on boarding process is initiated at our end. We will raise the invoice for the 1st

month's engagement. Once you make the payment, the developer will be introduced to you and on the same day – you can start working with the member of the team assigned to you. Please refer to the on boarding graphic in this presentation or contact us for more detailed info.

Do you keep a check on my developers?

We have different teams called “Clusters” in place, where developers of similar skills or technology stack be supervised by a Cluster Head. The Cluster Head keeps a daily check on engagement of all team members working with him, to ensure they are fully engaged and facilitate the work. You can also ask them about an update and take their inputs during the engagement period.

Do you consistently (and proactively) offer new ways to improve and accelerate the implementation and performance of my web and mobile app development projects?

To help maximize profitability, efficiency and competitive advantage, we hold monthly review meetings with our clients. We are constantly looking for new ways to help improve their operations, lower costs, increase efficiencies and resolve any problems that arise. We have a very open and forward thinking communication philosophy designed deliberately to help clients stay one-step ahead.

Do you keep a backup resource available in case my regular developer is unavailable?

Honestly, there cannot be a 100% replacement on immediate bases. In case of temporary unavailability of the developer due to sickness, emergencies or planned leaves – we compensate the working hours within same week or same month. In case we can't compensate the loss of hours due to unavailability of the resource, those hours will carry over for the next month and will be compensated in the subsequent weeks.

In case of longer absence of the developer, we will certainly replace the resource with the new one – again following the same on boarding procedure that was used to place the original developer.

Does all of your developers speak English?

Yes. However, we certainly do not consider ability to speak English as the ONLY benchmark of the development skill and intelligence. However, all of our developers are good at either writing or speaking english and can efficiently communicate. In case we have a very good developer who just cannot communicate to the extent you'd like – we will position a Project Manager level person to facilitate the communication and ensure there's no communication loss and strategic focus.

Can I contact my developer directly over phone?

Absolutely. We do not hide our team – and in the modern day of communication, we believe communication is the only way in which a lot of problems can be solved. We will share with you all contact info of our developers – their email address and Skype. In case of special cases, we don't mind sharing directly phone numbers of the developers to be able to communicate with them instantly with tools like WhatsApp and Messages.

Do you guarantee response time?

We do. We commit that all of your requests are responded within 12 hour window. Although we ensure you're well aware of the state of your project, tasks and any sensitive situations – we understand there may be cases where you need instant response. Please note that our response does not necessarily mean a "SOLUTION" at all times. We do handle emergencies and have a very good attentiveness during weekend as well. However, we would love to avoid emergencies during weekend but at the same time, we totally stay on top of the situation in general cases.

Whom do I speak in case I need some inputs, ideas or consultation?

We're all ears in case you have something to say. We love talking about industry, insights, sharing our learnings, experiences with other clients, and similar situations that gave us new insights. Just let the developer, the project manager or the BDM is in touch with you and we are just a call away.

What about Security?

We are equally alert about security as you are. All of our servers are behind a very secure firewall that prevents outside intrusion. Moreover, any sort of personal storage devices and laptops and cloud storage access is prevented in all computers in our network. So your data and code are 100% secure when they reside on our servers. Additionally, we have a very well defined IT policy, that imposes stringent rules for preventing unauthorized software installation with workgroup set up, personal device provisioning and remote access prevention.

Where do you keep the source code / assets of the work done? Are they always available?

It depends on the situation. Most of the time, we work on development servers set up on our end. Once you review and approve the work, the changes are uploaded on the live server. In case you already have a DevOps set up with development and live servers, we are absolutely happy to use the same and continue working directly on your own servers.

The advantage of working with our own servers is the speed of development, quick debugging and freedom to try at server level without hindering the actual live servers.

What are the payment terms?

Our payment process and schedule is extremely simple. It follows the simple principal of a Subscription model you may already be aware of.

We require the receipt of the fees of engaged resources in advance before the work begins.

When you are ready to start, you'll pay for the 1 month advance fee for the engaged resources. For the subsequent month – we will raise the invoice on 22nd the month, so that you can ideally process the payment within 7 days (before the month ends).

This prevents you from overpayment, as well as timely reimbursement for us to keep the team engaged with your project. For the fastest payment method, we prefer direct WIRE Transfer to our US or India bank. Alternatively, you can pay via PayPal or Credit Card as well. All the information of payment will be present in the invoice you'll receive.

Why do I need to pay advance?

Very good question. The advance payment ensures we 100% commit the resource to you and not have him/her engage in any other runtime work despite any classification of the work. Having cleared the payment will ensure we can provide you continuous delivery without hindrance including the source code all the time. You'll be in full custody of the work done so far and our written commitment to engage the resource for your work.

Additionally, it is a good practice to maintain payment-to-work association to build confidence and trust in each other for providing quality and uninterrupted services.

Do you offer Refund?

We will offer you refund if the developer is completely unable to provide you the work needed. If the work is satisfactory, but is not according to your standards – you'll be charged for the efforts the developer has put in, on PRO-RATA basis. The outstanding amount will be refunded back.

For the refund to be processed, we will insist you to try an alternative developer with a proper replacement if you wish. The replacement doesn't cost you anything. We have seen a replacement working out very well almost all the times.

What do you mean by 100% Guarantee?

In case of refund, the amount in question will be only for the current billing cycle. As we will provide streamed updates to you at all the times, any discrepancy in the expectations versus

reality has to be escalated to the relevant person immediately. We won't be able to refund for the work that's been presented and been properly reviewed and acknowledged by you.

When can I put a refund request?

Before we can process any request of refund – it is fare on our part to correct the situation and be given a chance. We know you don't pay to get a refund some day. You pay to get quality work. Therefore, we require you escalate the dissatisfaction of the work to the immediate supervisor or the relevant person as per escalation channel. If we are not able to resolve the case after 3 such iterations in a billing cycle, you've got a case for the refund.

In case of any dissatisfaction from the developer, we will require prior notifications for allowing us to look into the matter immediately and take necessary counter measures to improve quality and lead the project in right direction. In absence of any communication of such degree of dissatisfaction within a reasonable period, the notice period for termination as per mentioned in the contract shall apply.

Can I hire on a Part-Time bases?

Yes. We do have that option for special skills like Graphic designer, UI / UX Designer, Project Manager. Part-Time engagement enables the team member to be available for consecutive 4 hours per day on all working days in a week.

Do you offer discounts?

Everybody loves discount isn't it? No problem. We can certainly consider some, in case you're looking at hiring multiple developers.

Do you have any hidden fees?

No. Everything from cost perspective will be kept 100% transparent to you and we guarantee – there'll be NO SURPRISES when it comes to Dedicated Teams.

Can I terminate the service immediately?

No. You'll be required to notify us as per the contractual agreement before the said period as mentioned in the contract. You cannot terminate the engagement within the first month.

Why I can't can't cancel during first month?

It is too early to measure the effectiveness of the work, and doesn't help measure the effectiveness of the developer. In case of shorter work cycles, we'd prefer you work with us on Fixed cost based model.

Policies

Summary of our Privacy Policy

This is a summary of our new privacy policy which takes effect on May 25th, 2018. It covers every IndiaNIC website that links here, and all of the products and services contained on those websites. The detailed policy follows the same structure as this summary and constitutes the actual legal document.

Our commitment

IndiaNIC has never sold your information to any third party for advertising, monetary purpose or showing you other people's ads and promotions, and we never will. This has been our approach and commitment for almost 20 years, and we remain the same to it. This policy explains to you what information we do collect from you, what we do with it, who can access it, and what you can do about it.

Part I – Information IndiaNIC collects and controls

We only collect the information that we actually need and which is important to us to provide services to you. Some of that is information that you proactively give us while you contact us using email, contact forms or lead generation forms and ask for or acquire our services or buy something from us. We store your name and contact information like phone, social profiles, address etc., and your own project related information.

When you visit one of our websites or use our service, we automatically log some basic information like how you got to the site, where you navigated within it, your location and what features and settings you use. We use this information to improve our websites and services and to drive serve you better while providing our services.

Sometimes we receive information indirectly. If you ask about our services through one of our referral programs or reselling partners, or sign in to one of our products through an authentication service provider like LinkedIn or Google, Facebook they'll pass on your contact information to us. We'll use that information to complete the request that you made. If you engage with our brand on social media (for instance, liking, commenting, retweeting, mentioning, or following us), we'll have access to your interactions and profile information. We'll still have that information even if you later remove it from the social media site.

What we do with your information

We use your information to provide the services you've requested, create and maintain your accounts. We also use it to communicate with you about the services you're currently using, your customer support requests, new services you may like, chances for you to give us feedback, and policy updates. We analyze the information we collect to understand user needs and to improve our websites and services.

We are required to have a legal basis for collecting and processing your information. In most cases, we either have your consent or need the information provide the service you've requested from us. When that's not the case, we must demonstrate that we have another legal basis, such our legitimate business interests.

You can decline certain kinds of information use either by not providing the information in the first place or by opting out later. You can also disable cookies to prevent your browser from giving us information, but if you do so, certain website features may not work properly. We completely disable third-party cookies from all IndiaNIC websites.

We limit access to your personal information to our employees and vendors who have a legitimate need to use it.

The European Economic Area (EEA) provides certain rights to data subjects (including access, rectification, erasure, restriction of processing, data portability, and the right to object and to complain). IndiaNIC undertakes to provide you the same rights no matter where you choose to live.

We keep your personal information for as long as it is required for the purposes stated in the Privacy Policy. When we no longer have a legitimate need to process your information, we will delete, anonymize, or isolate your information whichever is appropriate.

Part II – Information that IndiaNIC processes on your behalf

If you handle other people's data using IndiaNIC services, such as information about your customers or employees, you are entrusting that data to us for processing.

Being a service providers you may share your customers, employees, vendors data as a part of project development process. You own your service data. We protect it, limit access to it, and only process it according to your instructions. You may access it, share it through third-party integrations, and request that we export or delete it.

We hold the data as long as you choose to use IndiaNIC services. After you terminate your contract, We may keep the data backup if you choose so for certain period of time, your data will be deleted from our development and backup server with your consent.

If you are in the European Economic Area and you believe that someone has entrusted your information to us for processing (for instance, your employee, your employer or a company whose services you use), you can request certain actions from us regarding your data. To

exercise those data rights, please contact the person or company that entrusted the data to us and we will work with them on your request.

Part III – General

There are some limitations to the privacy we can promise you. We will disclose personal information if it's necessary to comply with a legal obligation, prevent fraud, enforce an agreement, or protect our users' safety. We do not currently honor Do Not Track signals from internet browsers; when a universal standard for processing them emerges, we will follow it.

Third-party websites and social media widgets have their own separate privacy policies. Always check the relevant privacy policy before sharing personal information with third parties.

You can always contact us to: ask questions about our privacy practices, request a GDPR-compliant Data Processing Addendum, alert us if you believe we have collected personal data from a minor, or ask to have your personal information removed from our blogs or forums. You can also check our Security Policy and Privacy Policy.

We will contact you to let you know if we make any major changes to our privacy policy, or in the highly unlikely event that we ever decide to sell our services.

Privacy Policy

This Privacy Policy statement is made by the IndiaNIC Group consisting of all the entities listed here (collectively, "IndiaNIC", "we", "us" or "our") and is effective as of 25th May 2018. It applies to all our divisions: IndiaNIC Infotech Limited and Netlancers Inc DBA IndiaNIC.

IndiaNIC's Privacy Commitment

IndiaNIC has worried about customer and user privacy for almost 20 years, long before it become politically correct, fashionable, or legally binding to take such position. We ask / collect only the least amount of information necessary gathering only when we believe is essential for doing business, or for the specific transaction at hand. We let customers know the information we have on them and allow them to opt out for specific engagements. But, our biggest commitment is that we do not make a single dollar from advertising revenue-never have, never will, even if you just have submit a enquiry for project and does not opt to our services. We avoid the fundamental conflict of interest between gathering customer information and fueling advertising revenue, and the inevitable compromises in customer privacy that it brings.

The goal of this policy is to make explicit the information we gather on our customers and website users, how we will use it, and how we will not. This policy is unfortunately longer than we

would like, but we must unambiguously address all the relevant cases. We will try and keep the language simple and direct as much as possible.

Scope of this Privacy Policy

This Privacy Policy applies to all IndiaNIC websites that link to it. It also applies to the products and services provided by IndiaNIC through these websites, our mobile applications. This Privacy Policy does not apply to any of our websites, products or services that have a separate privacy policy.

This Privacy Policy is divided into three parts:

Part I – Information IndiaNIC collects and controls

This part deals with how IndiaNIC collects and uses information about website visitors, potential customers, users of IndiaNIC's services, and others who contact IndiaNIC through forms or email addresses published on or linked to our websites.

Part II – Information that IndiaNIC processes on your behalf

This part deals with how IndiaNIC handles data that you entrust to IndiaNIC when you use our products and services, or when you share any personal or confidential information with us while requesting customer support.

Part III – General

This part deals with topics that are relevant to both Parts I and II, and other general topics such as IndiaNIC's security commitments and how we will inform you when we change this Privacy Policy.

Part I – Information IndiaNIC collects and controls

What information IndiaNIC collects

We collect information about you only if we need the information for some legitimate purpose. IndiaNIC will have information about you only if (a) you have provided the information yourself, (b) IndiaNIC has automatically collected the information, or (c) IndiaNIC has obtained the information from a third party. Below we describe the various scenarios that fall under each of those three categories and the information collected in each one.

Information that you provide us

Enquiry Form / Email / Third Party Partners to generate new enquiries : When you contact us using online web form, email to obtain or enquire regarding one or more of our services, we ask for information like your name, contact number, email address, company name and country to complete the enquiry process. You may also provide us with more information such as your photo, time zone and language, but we don't require that information for initial contact. Once you submit the enquiry in any above mentioned form, our legitimate employees will have direct access to your information to further process the enquiry and contact you in regard with obtaining pre-sales information regarding your business and project related information.

Surveys, Feedback and other form submissions: We record information that you submit when you (i) register for any event, including webinars or seminars, (ii) subscribe to our newsletter or any other mailing list, (iii) submit a form in order to download portfolio, company profile, whitepaper, or other materials, (iv) participate in contests or respond to surveys, or (v) submit a form to request customer support or to contact IndiaNIC for any other purpose.

Project Creation : When you acquire or sign a contract to buy any of our services, we ask you to provide your name, contact information, personal details, project related information, social media profile links and timezone. We store all of this information to our secured project management software (ERP).

Payment processing : When you acquire or buy any of services from us, we ask you to provide your name, contact information, and credit card information or paypal. We NEVER STORE any of your Payment related information including credit card, bank details, paypal details or any other means through which you choose to make a payment. All payments are getting processed with secured servers of our Payment Gateway Service Providers.

Testimonials : When you authorize us to post testimonials about our products and services on websites, we may include your name and other personal information in the testimonial. You will be given an opportunity to review and approve the testimonial before we post it. If you wish to update or delete your testimonial, you can contact us through this form.

Interactions with IndiaNIC : We may record, analyze and use your interactions with us, including email, telephone, and chat conversations with our sales, project management, account management and customer support professionals, for improving our interactions with you and other customers.

Information that we collect automatically

Information from browsers, devices and servers : When you visit our websites, we collect information that web browsers, mobile devices and servers make available, such as the internet protocol address, browser type, language preference, time zone, referring URL, date and time of access, operating system, mobile device manufacturer, mobile network information and your geographic information. We include these in our log files to understand more about visitors to our websites.

Information from first party cookies and tracking technologies : We use temporary and permanent cookies to identify users of our services and to enhance user experience. We also use cookies, tags, scripts, and other similar technologies to identify visitors, track website navigation, gather demographic information about visitors and users, understand email campaign effectiveness and for targeted visitor and user engagement by tracking your activities

on our websites. We use third-party tracking services like google analytics and google tag manager to understand the behaviour of our website visitors and serve them better.

Information from application logs and mobile analytics : We collect information about your use of our website and mobile applications from application logs and third party analytics tools, and use it to understand how your business use and needs can improve our services. This information includes clicks, scrolls, features accessed, access time and frequency, errors generated, performance data, and configurations, and devices used to access and their locations.

Information that we collect from third parties

Referrals : If someone has referred any of our products or services to you through any of our referral programs, that person may have provided us your name, email address and other personal information. You may contact us through this form to request that we remove your information from our database. If you provide us information about another person, or if another person gives us your information, we will only use that information for the specific reason for which it was provided to us.

Information from social media sites and other publicly available sources : When you interact or engage with us on social media sites such as Facebook, Twitter, Google+ and Instagram through posts, comments, questions and other interactions, we may collect such publicly available information, including profile information, to allow us to connect with you, improve our services, or better understand user reactions and issues. We must tell you that once collected, this information may remain with us even if you delete it from the social media sites.

Purposes for using information

In addition to the purposes mentioned above, we may use your information for the following purposes:

To communicate with you (such as through email) about projects that you have and services that you have enquired for, changes to this Privacy Policy, changes to the Terms of Service, or important notices;

To keep you posted on new products and services, upcoming events, offers, promotions and other information that we think will be of interest to you;

To ask you to participate in surveys, or to solicit feedback on our products and services;

To set up and maintain your account, and to do all other things required for providing our services, such as enabling collaboration, requirement gathering, project development, and deployment of project;

To understand how users use our products and services, to monitor and prevent problems, and to improve our products and services;

To provide customer support, and to analyze and improve our interactions with customers;

To detect and prevent fraudulent transactions and other illegal activities, to report spam, and to protect the rights and interests of IndiaNIC, IndiaNIC's users, third parties and the public;

To update, expand and analyze our records, identify new customers, and provide products and services that may be of interest to you;

To analyze trends, administer our websites, and track visitor navigations on our websites to understand what visitors are looking for and to better help them;

To monitor and improve marketing campaigns and make suggestions relevant to the user.

Legal bases for collecting and using information

Legal processing bases applicable to IndiaNIC : If you are an individual from the European Economic Area (EEA), our legal basis for information collection and use depends on the personal information concerned and the context in which we collect it. Most of our information collection and processing activities are typically based on (i) contractual necessity, (ii) one or more legitimate interests of IndiaNIC or a third party that are not overridden by your data protection interests, or (iii) your consent. Sometimes, we may be legally required to collect your information, or may need your personal information to protect your vital interests or those of another person.

Withdrawal of consent : Where we rely on your consent as the legal basis, you have the right to withdraw your consent at any time, but this will not affect any processing that has already taken place.

Legitimate interests notice : Where we rely on legitimate interests as the legal basis and those legitimate interests are not specified above, we will clearly explain to you what those legitimate interests are at the time that we collect your information.

Your choice in information use

Opt out of non-essential electronic communications : You may opt out of receiving newsletters and other non-essential messages by using the 'unsubscribe' function included in all such messages. However, you will continue to receive notices and essential transactional emails, related to services you acquired for.

Disable cookies : You can disable browser cookies before visiting our websites. However, if you do so, you may not be able to use certain features of the websites properly.

Who we share your information with

All IndiaNIC group entities listed here have access to the information covered in Part I. We do not sell any personal information. We share your information only in the ways that are described in this Privacy Policy, and only with parties who adopt appropriate confidentiality and security measures.

Employees and independent vendors : Employees and independent vendors of all IndiaNIC group entities have access to the information covered in Part I on a need-to-know basis. We require all employees and independent vendors of IndiaNIC group entities to follow this Privacy Policy for personal information that we share with them.

Third-party service providers : We may need to share your personal information and aggregated or de-identified information with third-party service providers that we engage, such as marketing and advertising partners, event organizers, web analytics providers and payment processors. These service providers are authorized to use your personal information only as necessary to provide these services to us.

Other cases : Other scenarios in which we may share the same information covered under Parts I and II are described in Part III.

Your rights with respect to information we hold about you as a controller

If you are in the European Economic Area (EEA), you have the following rights with respect to information that IndiaNIC holds about you. IndiaNIC undertakes to provide you the same rights no matter where you choose to live.

Right to access : You have the right to access (and obtain a copy of, if required) the categories of personal information that we hold about you, including the information source, purpose and period of processing, and the persons to whom the information is shared.

Right to rectification : You have the right to update the information we hold about you or to rectify any inaccuracies. Based on the purpose for which we use your information, you can instruct us to add supplemental information about you.

Right to erasure : You have the right to request that we delete your personal information in certain circumstances, such as when it is no longer necessary for the purpose for which it was originally collected.

Right to restriction of processing : You may also have the right to request to restrict the use of your information in certain circumstances, such as when you have objected to our use of your data but we need to verify whether we have overriding legitimate grounds to use it.

Right to object : You have the right to object to the use of your information in certain circumstances, such as the use of your personal information for direct marketing.

Right to complain : You have the right to complain to the appropriate supervisory authority if you have any grievance against the way we collect, use or share your information. This right may not be available to you if there is no supervisory authority dealing with data protection in your country.

Retention of information

We retain your personal information for as long as it is required for the purpose stated in this privacy policy. We may retain your information for longer periods as permitted or required by law, such as to maintain suppression lists, prevent abuse, if required in connection with a legal claim or proceeding, to enforce our agreements, for tax, accounting, or comply with other legal obligations. We may store your information as we do required information related to our customers for legal means and financing and future contact purpose.

Part II – Information that IndiaNIC processes on your behalf

Information entrusted to IndiaNIC and purpose

Information provided in connection with services : You may entrust information that you or your organization (“you”) control, to IndiaNIC in connection with use of our services or for requesting technical support for our services. This includes information regarding your customers and your employees (if you are a controller) or data that you hold and use on behalf of another person for a specific purpose, such as a customer to whom you provide services (if you are a processor). The data may either be stored on our servers when you use our services, or transferred or shared to us as part of a request for technical support or other services.

(All the information entrusted to IndiaNIC is collectively termed “service data”)

Ownership and control of your service data

We recognize that you own your service data. We provide you complete control of your service data by providing you the ability to (i) access your service data, (ii) share your service data through supported third-party integrations, and (iii) request export or deletion of your service data.

How we use service data

We process your service data when you provide us instructions through the various phases of our services or project development.

Who we share service data with

IndiaNIC group and third party sub-processors : In order to provide services and technical support during the development, the contracting entity for which you want to acquired third-party services.

Employees and independent vendors : We may provide access to your service data to our employees and individuals who are independent contractors of the IndiaNIC group entities involved in providing the services (collectively our “employees”) so that they can (i) identify, analyze and resolve errors, (ii) manually verify emails reported as spam to improve spam detection, We ensure that access by our employees to your service data is restricted to specific individuals, and is logged and audited. Our employees will also have access to data that you knowingly share with us for project development, technical support or to import data for testing purpose for project development needs. We communicate our privacy and security guidelines to our employees and strictly enforce privacy safeguards within the IndiaNIC group.

Third-party integrations you have enabled : If you choose to enable any third-party integrations with your project, you may be allowing the third party to access your service information and personal information about you. We encourage you to review the privacy practices of the third-party services and products before you enable integrations with them.

Other cases : Other scenarios in which we may share information that are common to information covered under Parts I and II are described in Part III.

Retention of information

We hold the data in your account as long as you choose to use IndiaNIC Services. Once you terminate your contract with IndiaNIC or Project is completed and delivered, your data, code, database will be stored for backup and repository purpose only in secured environment. Your personal and service data information being a client will be stored within our ERP for future reference and accounting purpose.

Data subject requests

If you are from the European Economic Area and you believe that we store, use or process your information on behalf of one of our customers, please contact the customer support if you would like to access, rectify, erase, restrict or object to processing, or export your personal data. We will extend our support to our customer in responding to your request within a reasonable timeframe.

Part III – General

Children’s personal information

Our services are not directed to individuals under 16. IndiaNIC does not knowingly collect personal information from children who are under 16 years of age. If we become aware that a child under 16 has provided us with personal information, we will take steps to delete such information. If you believe that a child under 16 years has provided personal information to us, please write to through this form with the details, and we will take the necessary steps to delete the information we hold about that child.

How secure is your information

We have taken steps to implement appropriate administrative, technical & physical safeguards to prevent unauthorized access, use, modification, disclosure or destruction of the information you entrust to us. If you have any concerns regarding the security of your data, we encourage you to check our Security Policy or write to us through this form with any questions.

Locations and international transfers

We share your personal information and service data within the IndiaNIC Group. By accessing or using our products and services or otherwise providing personal information or service data to us, you consent to the processing, transfer, and storage of your personal information or Service Data within the United States of America, the European Economic Area (EEA) and other countries where IndiaNIC operates. Such transfer is subject to a group company agreement that is based on EU Commission's Model Contractual Clauses.

Do Not Track (DNT) requests

Some internet browsers have enabled 'Do Not Track' (DNT) features, which send out a signal (called the DNT signal) to the websites that you visit indicating that you don't wish to be tracked. Currently, there is no standard that governs what websites can or should do when they receive these signals. For now, we do not take action in response to these signals.

External links on our websites

Some pages of our websites may contain links to websites that are not linked to this Privacy Policy. If you submit your personal information to any of these third-party sites, your personal information is governed by their privacy policies. As a safety measure, we recommend that you not share any personal information with these third parties unless you've checked their privacy policies and assured yourself of their privacy practices.

Blogs and forums

We offer publicly accessible blogs on our websites. Please be aware that any information you provide on these blogs may be used to contact you with unsolicited messages. We urge you to be cautious in disclosing personal information in our blogs and forums. IndiaNIC is not responsible for the personal information you elect to disclose publicly. Your posts and certain

profile information may remain even after you terminate your account with IndiaNIC. To request the removal of your information from our blogs, you can contact us through this form.

Social media widgets

Our websites and blog include social media widgets such as Facebook “like” buttons and Twitter “tweet” buttons that let you share articles and other information. These widgets may collect information such as your IP address and the pages you navigate in the website, and may set a cookie to enable the widgets to function properly. Your interactions with these widgets are governed by the privacy policies of the companies providing them.

Disclosures in compliance with legal obligations

We may be required by law to preserve or disclose your personal information and service data to comply with any applicable law, regulation, legal process or governmental request, including to meet national security requirements.

Enforcement of our rights

We may disclose personal information and service data to a third party if we believe that such disclosure is necessary for preventing fraud, investigating any suspected illegal activity, enforcing our agreements or policies, or protecting the safety of our users.

Business Transfers

We do not intend to sell our business. However, in the unlikely event that we sell our business or get acquired or merged, we will ensure that the acquiring entity is legally bound to honor our commitments to you. We will notify you via email or through a prominent notice on our website of any change in ownership or in the uses of your personal information and service data. We will also notify you about any choices you may have regarding your personal information and service data.

Compliance with this Privacy Policy

We make every effort, including periodic reviews, to ensure that the personal information you provide is used in conformity with this Privacy Policy. If you have any concerns about our adherence to this Privacy Policy or the manner in which your personal information is used, kindly write to us through this form. We’ll contact you, and if required, coordinate with the appropriate regulatory authorities to effectively address your concerns.

Notification of changes

We may modify the Privacy Policy at any time, upon notifying you through a service announcement or by sending an email to your primary email address. If we make significant

changes to the Privacy Policy that affect your rights, you will be provided with at least 30 days' advance notice of the changes by email to your primary email address. If you think that the updated Privacy Policy affects your rights with respect to your use of our products or services, you may terminate your use by sending us an email within 30 days. Your continued use after the effective date of changes to the Privacy Policy will be deemed to be your agreement to the modified Privacy Policy. You will not receive email notification of minor changes to the Privacy Policy. If you are concerned about how your personal information is used, you should check back at Our Policies periodically.

Your acceptance of these terms

By using this Site, you signify your acceptance of this policy. If you do not agree to this policy, please do not use our Site. Your continued use of the Site following the posting of changes to this policy will be deemed your acceptance of those changes.

Governing Law

The terms and conditions and transactions contemplated hereby shall be governed by and construed and interpreted in accordance with, the state of Gujarat, India, without regard to the choice-of-law principles thereof. The United Nations Convention on the Contracts for the international Sale of Goods shall not apply to any agreement done with IndiaNIC or its subsidiary or parent company/companies. Any action seeking legal or equitable relief arising out of or relating to these Terms or the Manual will be brought only in the courts of Ahmedabad, Gujarat, India.

Refund Policy

IndiaNIC believes in helping its customers as much as possible, and has therefore a considerate cancellation policy. We, as a merchant, provide a service that comes in the form of services. As such, our offering is not a tangible product that can be returned for a refund. It can be used immediately upon receipt; there is no product to return.

IndiaNIC undertakes all projects under the purview of Milestones that dictate the direction / road-map followed by the project.

All Web Design/ Development/ Applications are carried out and accepted upon a complete analysis and creation of a complete scope document, in order to make sure that teams have complete understanding of the work needed to be done, elimination possibilities of a project cancellation / reversal / dispute.

Since IndiaNIC and the Clientele realize that there is work involved in achieving every milestone of the project and completion of every module, a refund would not be possible for the work already completed.

IndiaNIC makes sure that in case of a project termination on a mutual basis, the client has control of all the work done till that date and the money, if paid for further development, is returned.

IndiaNIC also respects a decision made by a client to work with a different provider within 48 hours of the project initiation. In such a scenario IndiaNIC would refund the amount for the project that has been paid till date.

No cancellations are entertained for those Services that the IndiaNIC marketing team has offered on special occasions. These are limited occasion offers and therefore cancellations are not possible.

Development Services and Consulting – if the services opted by you are T&M (Time & Material) based services or Hire Dedicated Developer service, these are non-refundable.

Cancellation Policy

All cancellation requests must be submitted to Project Management Office (PMO) of IndiaNIC. You may submit your cancellation requests by e-mail. Your request will not be considered valid unless and until you receive confirmation from our Project Management Office.

We take minimum 2 weeks to process the cancellation request.

Cancellation of project is based on service level agreement, as agreed with you while starting the project.

Once project is released for beta delivery, cannot be canceled.

In event of cancellation of project mutually decided between you & IndiaNIC, you have to pay for efforts invested in project up to date of cancellation.

Source Code, Design or any other material related to project will not be delivered if payment is not settled by you.

Delivery Policy

We are in service business and doesn't have tangible item to deliver. So there is no chance of missing or misplacement of any item. Our deliverables are in form of designs file, software code & compiled application. These deliverable are delivered to you in form of electronic files using our collaboration tool or email. Thereafter you have to save a copy of delivered electronic files on your server or on any storage media. Up-to 30 days from delivery date IndiaNIC can re-deliver the electronic files to you, thereafter IndiaNIC doesn't owe the responsibility.

Simple Process

That enables efficient transformations

How to Engage?

Every project is a unique project, and hence – requires very special and dedicated treatment. Besides the critical triangle of cost, time and scope – the working model between the client and

the agency also plays a crucial part in balancing the former. That's why, we have a very robust, yet simple models – that are extremely flexible and client-centric inside.

Constrained Budget

If you have a well defined project story, and complete scope ready, we can give you a fixed cost and projected timeline.

When to choose

Constrained Budget Engagement

Very clear scope and stable set of requirements that isn't likely to change throughout the project

Can define clear long term milestones – irrespective of the working models chosen (i.e. Agile or Waterfall)

At times, works best when you're working under a tight budget as well, to stay focused on extremely critical features you cannot compromise with.

When you have less time to spend with development team, so that you can focus on business side of your venture.

Evolving Scope

Best suited when you have a blueprint of a large project OR an ongoing project that needs continuous enhancements – where iterations are eminent. We compose for you the best in class team having multiple skills – who works closely with you just like your own remote team.

When to choose

Evolving Scope Engagement

The Scope is defined very briefly and the requirements are very likely to change throughout the project

Can define clear short term milestones – depending on the working model chosen (i.e. Agile or Waterfall)

Works best when you're ready to go into multiple iterations for a given feature and fine tune it by inspecting all the possible aspects.

When you have more time to spend with development team, by sharing clear objectives and goals so that they are always in sync with you.

Transparent Workflow

Flexible at the core. Organized to stay in sync.
